

Internal Prospect Projected WAR Rankings from 2022-2024

Hitters

Full Year (Players in Pre-Season AND End-of-Season Run) –

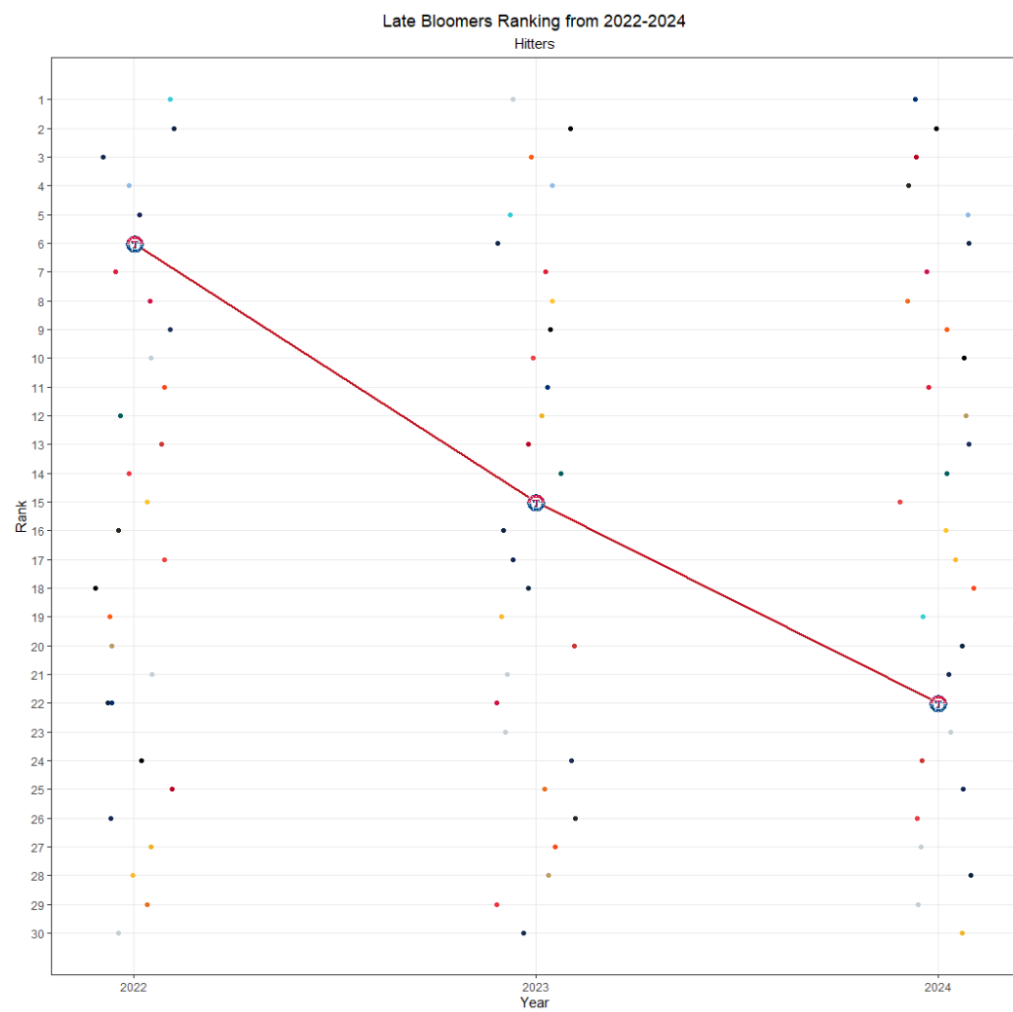

- 2022 (#22): Among players in the pre-season and end-of-season run, saw increased value from Aaron Zavala, Bubba Thompson, Ezequiel Duran and Alejandro Osuna. Saw decrease in value from Dustin Harris, Luisangel Acuna, and Josh Jung (Although Acuna and Jung, specifically, still held plenty of value).
- 2023 (#28): One of the worst teams among players in both runs, primarily due to the loss in value from Aaron Zavala. Some other losses from Cody Freeman, Danyer Cueva, and Ian Moller. Did see increased value from Evan Carter and Abimelec Ortiz.
- 2024 (#28): Another poor season thus far among players in both runs. Have seen loss primarily from Jonathan Ornelas, Abi Ortiz, Chandler Pollard and Anthony Gutierrez, but have seen wins by adding value to Justin Foscue, Gleider Figuereo, and maintaining Sebastian Walcott's high value.

Internal Prospect Projected WAR Rankings from 2022-2024

Late Bloomers (Players NOT in Pre-Season Run but WERE in End-of-Season Run) –

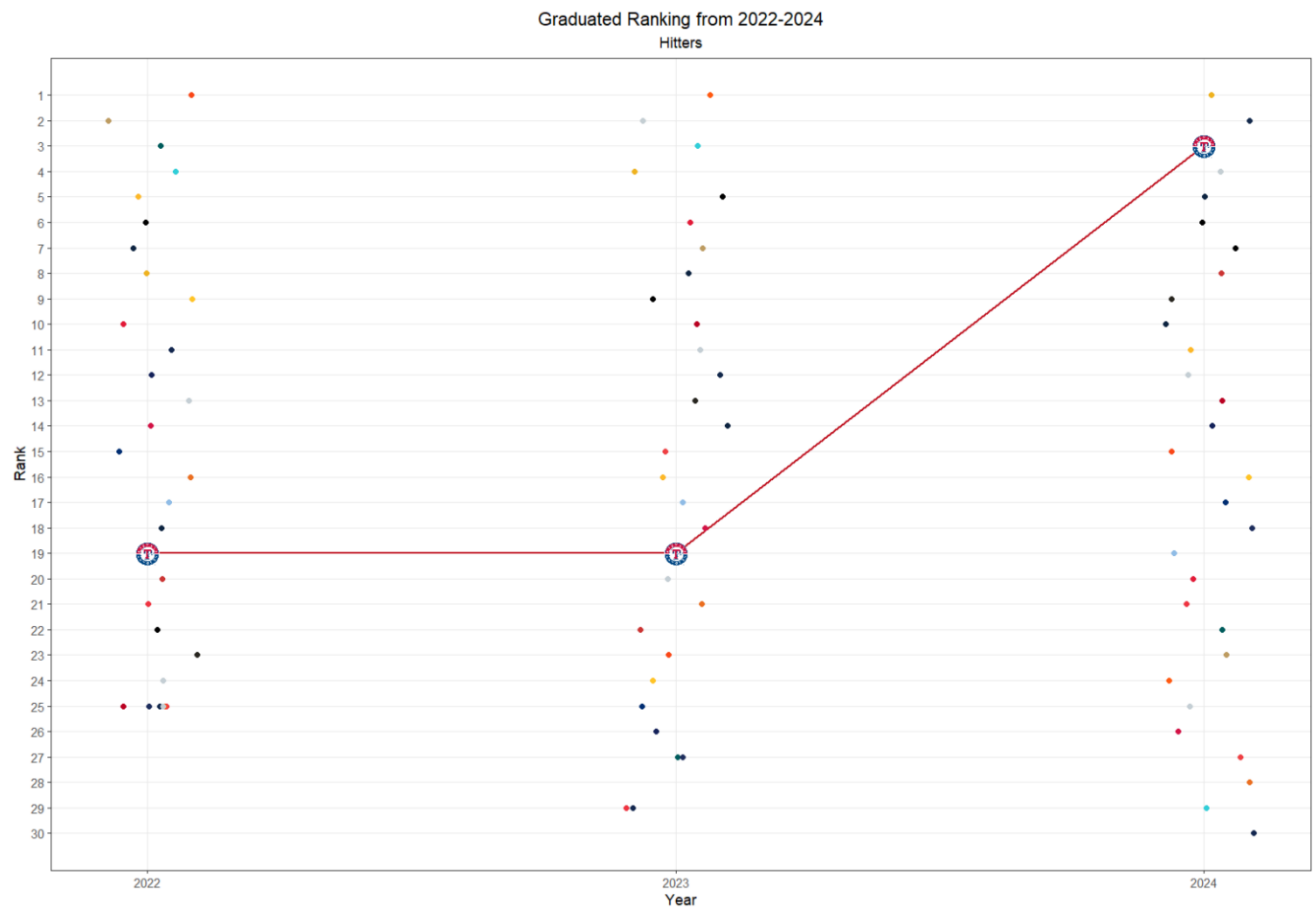

- 2022 (#6): Solid year for the late bloomers category this year, ranking in the top 10 in adding value to the farm system in that way. Primary players who contributed included Yeison Morrobel, Maximo Acosta, and Ian Moller.
- 2023 (#15): Descent job in the late bloomers category, primarily caused by the emergence of Anthony Gutierrez, Chandler Pollard, and Tommy Specht in affiliate ball.
- 2024 (#22): Fair job in the late bloomers category, but a drop from the previous year. Led by Echedry Vargas, but contributions from Maxton Martin and Arturo Disla as well.

Internal Prospect Projected WAR Rankings from 2022-2024

Graduated (Players Called Up to the Big Leagues with at least 100 days MLB Service) –

- 2022 (#19): Only really had one prospect graduate to the big leagues, which was Josh Smith.
- 2023 (#19): Again, fairly middle of the pack, but graduated both Josh Jung and Ezequiel to the major league level.
- 2024 (#3): Excellent job of graduating hitters this year, as our two top hitting prospects, Evan Carter and Wyatt Langford, both became big leaguers.

Internal Prospect Projected WAR Rankings from 2022-2024

Rookie WAR (WAR Among Players in First MLB Season) –

Can see by the rankings, each year we've seen more contributions from our rookie hitters from 2022 to 2024.

Hitters Rookie WAR Ranking			
2022-2024			
Team	Year	Rookie WAR	Rank
TEX	2022	0.3	19
TEX	2023	1.0	13
TEX	2024	1.6	5

Overall

Hitters Rookie WAR			
2022-2024			
Player	Team	Year	Rookie WAR
Elier Hernandez	TEX	2022	-0.1
Steele Walker	TEX	2022	-0.2
Bubba Thompson	TEX	2022	0.3
Ezequiel Duran	TEX	2022	0.4
Josh Smith	TEX	2022	-0.3
Josh Jung	TEX	2022	0.2
J.P. Martinez	TEX	2023	-0.2
Jonathan Ornelas	TEX	2023	0.0
Evan Carter	TEX	2023	1.2
Sandro Fabian	TEX	2024	-0.1

Pitchers

Full Year (Players in Pre-Season AND End-of-Season Run) –

- 2022 (#29): Really poor development wise among players in both runs. Primary losses were Cole Winn, Cody Bradford, Chase Lee and Avery Weems. Primary gainers this year came from Cole Ragans and Marc Church.
- 2023 (#23): A little better at developing full year pitchers, but still in bottom 10. Cody Bradford was a big driver in our success, as well as Aidan Curry and Jose Corniell, but the losses came from several of our better guys, like Cole Winn, Jack Leiter, and Owen White.
- 2024 (#8): A much better year for player development in 2024, now in the top 10! Several pitchers took big strides this year, including Mitch Bratt, Jose Gonzalez, Kumar Rocker, Kohl Drake, David Davalillo, Skylar Hales, and Winston Santos. Some loss in value came from Jose Corniell, Brock Porter, Marc Church, and DJ McCarty.

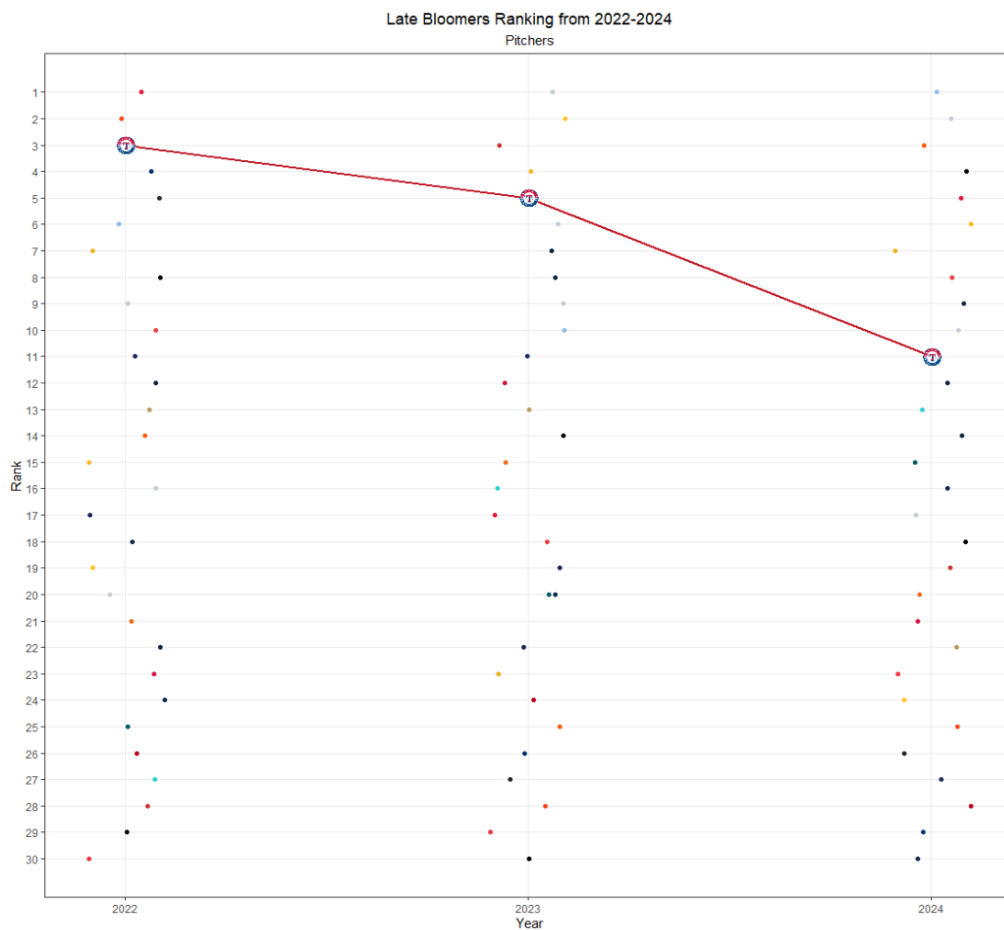

Internal Prospect Projected WAR Rankings from 2022-2024

Late Bloomers (Players NOT in Pre-Season Run but WERE in End-of-Season Run) –

- 2022 (#3): Excellent value added from late bloomers, primarily from Jack Leiter and Mitch Bratt entering the ranks.
- 2023 (#5): Another really solid year for late bloomers, in the top 5 once again. Kumar Rocker and Brock Porter were the main reasons for this.
- 2024 (#11): A good job again this year with late bloomers, specifically from Alejandro Rosario, as well a Ryan Lobus and Case Matter.

The reason so many good pitchers end up in this category is because most were drafted in the previous season, but didn't begin pitching in affiliate ball until the following season and, thus, didn't enter our model until then.

Internal Prospect Projected WAR Rankings from 2022-2024

Graduated (Players Called Up to the Big Leagues with at least 100 days MLB Service) –

- 2022 (#13): Descent job of graduating pitchers, solely due to the promotion of Glenn Otto.
- 2023 (#21): A fair job of graduating pitchers, again solely due to one pitcher – Cole Ragans.
- 2024 (#6): Solid job of graduating pitchers to the big leagues, as we saw several of our long-time pitching prospects (Jack Leiter, Cole Winn, Cody Bradford) finally break through to the ML level.

Internal Prospect Projected WAR Rankings from 2022-2024

Rookie WAR (WAR Among Players in First MLB Season) –

Have been in the bottom 10 every year in terms of contributions from our rookie pitchers from 2022 to 2024.

Takeaways

Although overall hitting development has been relatively poor over the past three seasons, we've found success in graduating several of our top hitting prospects to the big leagues in that time. These young stars have increasingly filled in the ML roster and had a bigger impact on the team's offensive production each year. Pitching development was struggling a few seasons ago, but each year since has seen our farm's arm talent go from bottom 10 to top 10 in the league in terms of adding and maintaining value. Overall, the fact that our last three first-round draft picks before this season are all currently making an impact on the big-league roster should be considered a testament to our ability to draft, develop, and graduate our highest value prospects consistently.
